PROFESSIONAL SUMMARY:

Business Analyst with **2.7 years of experience** delivering enterprise software solutions across Retail, Healthcare, and Internal Engineering domains. Experienced in partnering with Product Owners, business stakeholders, and Agile teams to translate business needs into scalable digital solutions through requirement elicitation, business process analysis, functional documentation, and product delivery.

WORK EXPERIENCE:

Business Analyst

Avasoft Pvt. Ltd, Chennai, TN

December 2023- July 2026

- Served as the primary Business Analyst, partnering with Product Owners and business stakeholders to deliver enterprise applications uncovering business needs, and facilitated **20+ requirement gathering workshops** and Identified opportunities for business process optimization by analyzing workflows, reducing manual effort, and improving operational efficiency.
- By conducting Stakeholder Interviews, translated complex business requirements into **20+ Functional Requirement Documents (FRDs)**, used Confluence as Project Artifact, Functional Specifications and **200+ development-ready User Stories**, following the **INVEST** principle to improve requirement clarity, estimation accuracy, and sprint readiness.
- Defined comprehensive Use Cases, Acceptance Criteria, business rules, assumptions, constraints, and success criteria to minimize requirement gaps during development and **UAT**.
- Produced **As-Is** and **To-Be** process models, **BPMN** process flows, **swimlane** diagrams, and workflow documentation that enabled business stakeholders and engineering teams to align future-state business processes and identify process gaps.
- Maintained requirement traceability through **Requirement Traceability Matrix (RTM)** project documentation, and change documentation throughout the **SDLC**.
- Collaborated within a 15+ member Scrum team, actively contributing to **Sprint Planning, Backlog Refinement, Story Estimation, Sprint Reviews, Sprint Retrospectives, and Release Planning** across multiple Agile delivery cycles.
- Prioritized product backlog items using **MoSCoW** prioritization, balancing business value, performed requirement impact and risk assessments for **15+ change requests** to minimize delivery risks and ensure alignment with business objectives.
- Supported **30+ production deployments**, validating business functionality, coordinating release readiness activities, and ensuring smooth production rollouts with minimal business disruption.
- Collaborated directly with **15+ international Product Owners** and business users through requirement workshops, solution walkthroughs, UAT sessions, sprint reviews, and weekly governance meetings.
- Coordinated **20+ User Acceptance Testing (UAT) cycles** by preparing business validation scenarios, supporting stakeholder testing, triaging functional issues, and obtaining business approvals before production releases.

- Validated business functionality using **SQL data analysis**, **REST APIs**, **Postman**, and **JSON**, ensuring business rules, data integrity, and system integrations met functional expectations.
- Collaborated with cross-functional teams including **UI/UX teams** by designing and reviewing wireframes using **Figma**, **Microsoft Visio**, and **Draw.io**, reducing rework by validating business workflows before development.
- Partnered closely with Development and QA teams throughout the **SDLC** to clarify functional requirements, resolve requirement gaps, and validate business functionality.

PROJECTS:

1. Enterprise Platform Expansion:

- Supported the regional expansion of an enterprise rental platform by analyzing business and process differences, translating stakeholder needs into functional requirements, and supporting solution design and delivery validation.
- Led business analysis activities across the SDLC, collaborating with Product Owners and cross-functional teams on requirement gathering, functional documentation, stakeholder validation, UAT, and production rollout.

2. Engineer Performance Tracker:

- Analyzed business requirements for an engineer analytics platform providing leadership with insights into team performance, resource utilization, delivery metrics, and technology adoption.
- Defined KPIs, business rules, reporting requirements, and measurement logic to provide leadership visibility into program performance and operational health. Collaborated with stakeholders to validate dashboard outputs and ensure metrics supported operational decision-making.

SKILLS:

- | | |
|--|---|
| • Business Process Analysis & Optimization | • UAT & Business Validation |
| • Process Mapping & Workflow Analysis | • Agile/Scrum & SDLC |
| • Gap & Root Cause Analysis | • Business Metrics, KPI & Dashboard Reporting |
| • Cross-functional Program Coordination | • Program Management & Governance |
| • Wireframes/ Process Flow Diagrams | • Jira & Confluence |
| • Stakeholder Management | • SQL Data Analysis/ REST API/ Postman |
| • Requirements Gathering & Elicitation | • Microsoft Excel/ Word/ PowerPoint |
| • Risk & Change Management | • Figma/ Visio/ Draw.io |
| • Process Documentation & Governance | • Gen AI/ LLM/ RAG/ Agentic AI validation |

EDUCATION:

- Bachelor of Engineering in Civil in Excel Engineering College, Namakkal, Tamil Nadu- (2019-23).
